Temporary standpipe systems

Coffee Break Bulletin | April 2, 2019

Because of the extreme risk of a fire during the construction of a building, almost all of the building and fire codes have specified that a temporary standpipe system with a fire department connection (FDC) be installed and operational during the construction process.

Learn about the requirements for temporary standpipe systems in today's Coffee Break Bulletin.

The U.S. Fire Administration recommends everyone should have a comprehensive home fire protection plan that includes smoke alarms, fire sprinklers, and practicing a fire escape plan.
